CLEANAQUA Blue promotes resource protection through the better use of tap water

The water test conducted by “Stiftung Warentest”* in 2016 has shown that tap water in Germany has a very good quality compared to mineral water and moreover it is much cheaper, more resource-friendly and environmentally friendly, irrespective of CO2 pollution and plastic waste.

The disinfectants from CLEANAQUA Blue enable the safe drinking of drinking water from the water pipe or the water tank, thereby strengthening the existing public water supply and promoting the environmentally friendly use of our natural resources, but also vital ones.

* Stiftung Warentest is a foundation. It was established in 1964 by the German federal parliament with the aim of helping consumers by providing impartial and objective information based on the results of comparative investigations of goods and services.
